## **GOSPEL MUSIC CHANNEL SELECTS XYTECH SYSTEMS SOFTWARE TO AUTOMATE ITS MEDIA OPERATIONS**

**Burbank, CA/London UK, April 10, 2007**, - Xytech Systems Corporation, a leading provider of media business software and services for workflow management, resource scheduling, and media asset management, announced today that the Gospel Music Channel, a 24-hour all-genre gospel music channel based in Atlanta, Georgia, has acquired Xytech Systems' software to manage its workflow and operations.

The Gospel Music Channel offers a variety of programming, from music videos to long-form television, in a variety of gospel genres such as Southern gospel, contemporary, hi-hop, traditional, rock and metal. It offers the Faith & Fame, Front Row Live, and Southern Lunch series, in addition to specials such as Celebrate Freedom which is the largest contemporary music festival and the Super Bowl of Gospel, which is held each year at the location of the Super Bowl.

After investigating a variety of systems, the Gospel Music Channel chose Xytech Systems' software to manage their workflow and operations. They needed a comprehensive library system for managing all their media assets and metadata, including acquired materials, video clip agreements, long forms of air versions that are incorporated into shorter forms, host sheets, factoids, format sheets, and content from different shows. Xytech Systems MetaVault® library is an integral part of the Gospel Music Channel's ability to manage its content.

Dick Connell, Senior Manager of Programming Operations and Asset Management, states, "We chose Xytech for a variety of reasons: its' strong meta-data handling capabilities, the intuitive interface, flexibility, full functionality, and proven track record in the entertainment industry. We wanted a system that would grow as we grew, and which would allow us to manage our assets in the most beneficial manner."

Ron Peeters, Executive Vice President of Xytech Systems Corporation, adds, “We are pleased that the Gospel Music Channel has selected the Xytech System’s software to automate and manage all their precious media assets – something of great importance to any broadcaster. Having the capability to better manage all media in preparation for playout and repurposing allows them to fully leverage their entire asset library.”
